Brainstorm&Idea Prioritization

Date	19 September 2022
Team ID	PNT2022TMID12623
Project Name	Emerging methods for Early detection of forest fires
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization :

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- ⌚ 10 minutes to prepare
- 👥 1 hour to collaborate
- 👤 2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

⌚ 10 minutes

- A Team gathering**
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.
- B Set the goal**
Think about the problem you'll be focusing on solving in the brainstorming session.
- C Learn how to use the facilitation tools**
Use the Facilitation Superpowers to run a happy and productive session.

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

⌚ 5 minutes

Emerging Methods For Early Detection Of Forest Fires

Forest fires are a major environmental issue, creating economic and ecological damage while endangering human lives. There are typically about 100,000 wildfires in the United States every year. Over 9 million acres of land have been destroyed due to treacherous wildfires. It is difficult to predict and detect Forest Fire in a sparsely populated forest area and it is more difficult if the prediction is done using ground-based methods like Camera or Video-Based approach. Satellites can be an important source of data prior to and also during the Fire due to its reliability and efficiency. The various real-time forest fire detection and prediction approaches, with the goal of informing the local fire authorities

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

Fahmidha

- Based on Gaussian mixture model
- Image processing
- Fire Decton Using CNN Model

Dayana

- Detection using wireless sensor network
- Using Cluster Heads to determine the GPS
- Using Optical sensor and Digial camera

Annapoorani

- Collecting Data Using Satellite Image
- Monitoring the forest Using satellites
- Implementing Ground Level Sensor for data
- Deep Learning can be used

Santhi

- Prediction using machine learning
- Early detection using unmanned Aerial Vehicle
- Utilizing Neural network
- Using radio Acoustic Sounding system

3 Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

cluster A

```

graph LR
    A[Early detection using unmanned Aerial vehicles] --> B[Utilising in neural network]
    B --> C[Emerging method like sensor network]
        
```

Based on Gaussian Model

Detection using wireless sensors network

Using cluster to determine GPS

cluster B

Fire detection using CNN model

Based on Guasslan mixture model

Monitoring forest fire using satellite

Step-3: Idea Prioritization
